

LETTER MAIL AND PARCEL SORTING SOFTWARE

SORTENGINE 360

**Connect, customize,
control – effortless
management of postal
operations.**

Today's postal and parcel environment is growing in complexity SortEngine 360 software from BlueCrest can help connect, manage and control all postal and parcel operations across your business with data rich capabilities keeping you informed, secure, compliant, and optimized.

Secure

Encrypted data provides the highest level of security, ensures GDPR adherence, and monitors your sorting solution's performance.

Flexible

A powerful but flexible software platform provides custom business logis, postal induction, parcel management and address learning.

Data Capture

Multi-site, optical character recognition and optimized sort schemes.

Today's postal environment is growing in complexity. A variety of mail and packages arrive and leave daily, with different sizes, shapes, weights, and addressing, requiring a range of technology and workflows to effectively process. And often this processing happens at high volumes, across multiple sites, adding to the need for consolidated data management control and integrity.

MANAGE POSTAL AND PARCEL OPERATIONS

SortEngine 360 enables letter, flats, and parcel sortation solutions to be connected across your network. Every combination of technology – letter machines, flats technology, manual workstations, parcels and more – can be connected under one common platform to monitor and control from a single interface.

- Automate data capture
- Monitor equipment usage to identify any under-utilized machines
- Add capacity without adding more hardware
- Streamline the workforce and free up your facility footprint
- Increase throughput while maintaining accuracy and compliance

INCREASE EFFECTIVENESS

This proven platform features integrated OCR, barcode reading, and imaging technologies that gather data across the entire processing environment. SortEngine 360 software supports many applications out-of-the-box and can be customized to provide data on any aspect of your sortation operation.

ONE-TO-ONE VALIDATION FOR SECURITY AND TRANSPARENCY

With the ability to connect all systems through one common interface for configuration, operation, decision rules, and data gathering, you gain valuable insights that help you to monitor performance standards, streamline productivity, and better position for future challenges.

National Posts gain complete application support for the letters, flats, manual, and parcels processing postal rules including:

- Mail Sampling Module and interface with IPS
- CN22/23 OCR and Barcode reading module with best-in-class read rates and low error rates
- Open architecture for standardized communication protocols such as the UPP CEN

Private Posts can take advantage of a highly customizable application with many modules to manage the fast-changing rules. Features include sorting down to the post man including sequence or walk sort, reconciliation, revenue protection, and the ability to exchange mail data with other private posts.

Commercial businesses can ensure the applications and output adhere to county regulations and requirements for postal induction and reporting

FEATURES

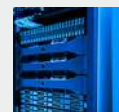

Standard interface features API, Open and CEN capabilities.

Data modules support multi-site, OCR data capture and Intelligenscheme.

Data Management supports Postal Induction, ALS and Custom Business Logic.

Security and control products also includes health data and GDPR adherence.
